New Azure Database for PostgreSQL Flexible server

Microsoft

⚠ Server names, networking connectivity method and backup redundancy cannot be changed after server is created. Review these options carefully before provisioning.

Basics Networking Security Tags Review + create

Create an Azure Database for PostgreSQL flexible server. [Learn more](#)

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription *

Resource group *
[Create new](#)

Server details

Enter required settings for this server, including picking a location and configuring the compute and storage resources.

Server name *

Region *

PostgreSQL version *

Workload type ☐ Development ☒ Production

Compute + storage
4 vCores, 16 GiB RAM, 128 GiB storage, P10 (500 IOPS)
Geo-redundancy : Disabled
[Configure server](#)

Availability zone

[Review + create](#) [Next: Networking >](#)

Estimated costs

Category	Configuration	Price
Compute Sku	Standard_D4ds_v5 (4 vCores, USD 64.97 per vCore)	4 x 64.97
	USD 259.88/month	
Storage	Storage selected 128 GiB (USD 0.12 per GiB)	128 x 0.12
	USD 14.72/month	
Bandwidth	For outbound data transfer across services in different regions will incur additional charges. Any inbound data transfer is free. Learn more	
Estimated total		USD 274.60/month

Prices reflect an estimate only. [View Azure pricing calculator](#)

Final charges will appear in your local currency in cost analysis and billing views.

- Subscription
 - Choose whatever is the name of your subscription
- Resource group
 - Create a new resource group
 - e.g. [collation](#)
- Server Details
 - Choose a suitable name
 - e.g. [data-warehouse-1-us](#)
- Region
 - East US (preferably)
- PostgreSQL version
 - 16
- Workload type
 - Production
- Compute + Storage
 - Choose the default specification
- Availability Zone
 - No preference
- High Availability
 - Disabled
- Authentication
 - PostgreSQL and Microsoft Entra authentication
- Admin credentials
 - Choose a username and password for the admin and save it in a secure place
- **Your total cost should be inside USD 300/- a month**

Go to the Networking tab

⚠ Server names, networking connectivity method and backup redundancy cannot be changed after server is created. Review these options carefully before provisioning.

Basics **Networking** Security Tags Review + create

Configure networking access and security for your server.

Network connectivity

You can connect to your server by specifying a public IP address, creating private endpoints or from within a selected virtual network.

Connectivity method ⓘ

☒ Public access (allowed IP addresses) and Private endpoint

☐ Private access (VNet Integration)

📘 Connections from the IP addresses configured in the Firewall rules section below will have access to this server. By default, no public IP addresses are allowed. [Learn more](#)

Public access

☒ Allow public access to this resource through the internet using a public IP address ⓘ

Firewall rules

Inbound connections from the IP addresses specified below will be allowed to port 5432 on this server. [Learn more](#)

☐ Allow public access from any Azure service within Azure to this server ⓘ

+ Add current client IP address (69.115.170.175) + Add 0.0.0.0 - 255.255.255.255

Firewall rule name Start IP address End IP address

Firewall rule name Start IP address End IP address

Final charges will appear in your local currency in cost analysis and billing views.

- Connectivity Method
 - Public Access
- Public Access
 - Allow public access ...
- Firewall rules
 - Allow public access from any Azure service ...
 - Create the following firewall rules
 - Collation 1
 - Start IP address
 - End IP address
 - Collation 2
 - Start IP address
 - End IP address
- Press Review + Create

Create a new database in the Flexible Server

- Wait for the server to get deployed
 - Takes a few minutes
- In the Azure portal, go back to Home
 - And select Azure Database for PostgreSQL – Flexible Server
- There select the Server you just created
- Click on databases
 - And create a new database
 - The name can be anything e.g. collation_one
 - Lowercase and no spaces
- One this database is created login directly using your preferred database viewing tool
 - We recommend Dbeaver Community Edition
 - <https://dbeaver.io/download/>
